Description

The RK12CX 12-ton Remote Tool is a hand-held tool intended to crimp cable, cut cable and threaded rod, and punch holes with the proper adapters. The single-acting ram requires hydraulic pressure to advance, and uses an internal spring to return.

This crimping tool requires an external 10,000 psi (700 bar) hydraulic power source, such as Greenlee 975, 976-22, 980, 980-22, and EHP700L. The RK12CX may also be powered using a hydraulic intensifier capable of developing 10,000 psi (700 bar), such as the Greenlee Dynapress® intensifier.

Safety

Safety is essential in the use and maintenance of Greenlee tools and equipment. This manual and any markings on the tool provide information for avoiding hazards and unsafe practices related to the use of this tool. Observe all of the safety information provided.

Purpose of this Manual

This manual is intended to familiarize all personnel with the safe operation and maintenance procedures for the following Greenlee tool:

RK12CX 12-ton Remote Tool

Keep this manual available to all personnel.

Replacement manuals are available upon request at no charge at www.greenlee.com.

Do not discard this product or throw away!

For recycling information, go to www.greenlee.com.

All specifications are nominal and may change as design improvements occur. Greenlee Tools, Inc. shall not be liable for damages resulting from misapplication or misuse of its products.

IMPORTANT SAFETY INFORMATION

SAFETY ALERT SYMBOL

This symbol is used to call your attention to hazards or unsafe practices which could result in an injury or property damage. The signal word, defined below, indicates the severity of the hazard. The message after the signal word provides information for preventing or avoiding the hazard.

⚠️ DANGER

Immediate hazards which, if not avoided, **WILL** result in severe injury or death.

⚠️ WARNING

Hazards which, if not avoided, **COULD** result in severe injury or death.

⚠️ CAUTION

Hazards or unsafe practices which, if not avoided, **MAY** result in injury or property damage.

⚠️ DANGER

Read and understand all of the instructions and safety information in this manual before operating or servicing this tool.

Failure to observe this warning will result in severe injury or death.

⚠️ DANGER

Do not use this crimping tool with any hydraulic hoses or other hydraulic components rated at less than 10,000 psi (700 bar).

Failure to observe this warning will result in severe injury or death.

⚠️ WARNING

Electric shock hazard:

This tool is not insulated. When using this unit on or near energized electrical lines, use proper personal protective equipment.

Failure to observe this warning could result in severe injury or death.

⚠️ WARNING

Wear eye protection when operating or servicing this tool.

Failure to wear eye protection could result in serious eye injury from flying debris or hydraulic oil.

⚠️ WARNING

Skin injection hazard:

Do not use hands to check for oil leaks. Oil under pressure easily punctures skin. If injured, seek medical attention immediately to remove oil.

Failure to observe this warning could result in serious injury, gangrene, or death.

⚠️ WARNING

Do not use solvents or flammable liquids to clean the tool body. Solvents or flammable liquids could ignite and cause serious injury or property damage.

IMPORTANT SAFETY INFORMATION

⚠ WARNING

An incomplete crimp can cause a fire.
Use proper die, connector, and cable combinations. Improper combinations can result in an incomplete crimp.
Failure to observe this warning could result in severe injury or death.

⚠ CAUTION

Do not perform any service or maintenance other than as described in this manual. Injury or damage to the tool may result.
Failure to observe this precaution may result in injury and property damage.

⚠ WARNING

Pinch points:
Keep hands away from the crimping tool head when crimping.
Failure to observe this warning could result in severe injury or death.

IMPORTANT

Follow the operating instructions and safety information supplied with the hydraulic power source.

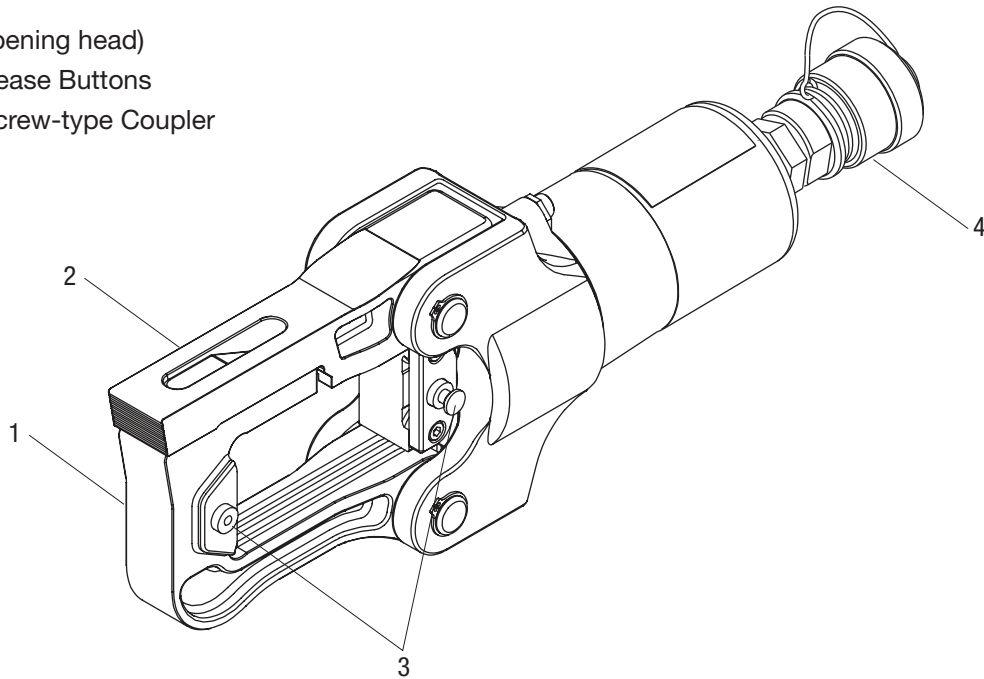

Note: Keep all decals clean and legible, and replace when necessary.

⚠ WARNING

Inspect tool and dies before use. Replace any worn or damaged parts. A damaged or improperly assembled tool can break and strike nearby personnel.
Failure to observe this warning could result in severe injury or death.

Identification

1. Head
2. Latch (for opening head)
3. Adapter Release Buttons
4. 3/8" Male Screw-type Coupler

Specifications

Tool

Length	13.0" (330.2 mm)
Width	4.5" (114.3 mm)
Height (with battery).....	2.7" (68.6 mm)
Weight	9.75 lb (4.4 kg)
Crimping Force	12 tons (106 kN)

Crimping Capacities

Copper Color-Coded Lugs and Splices	750 kcmil
Aluminum Color-Coded Lugs and Splices	750 kcmil
UA12ID Dieless Die Crimping Range	
Copper Color-Coded	
Lugs and Splices	4 AWG–750 kcmil
Aluminum Color-Coded	
Lugs and Splices	6 AWG–600 kcmil
5/8" Service Entrance Connectors	10–1/0 AWG
.840 Service Entrance Connectors.....	1/0–4/0 AWG
Aluminum Overhead "H" Taps.....	6 AWG–500 kcmil
One-Piece ACSR	
Tension Splices	4 AWG–556.5 kcmil
Two-Piece ACSR	
Tension Splices	2 AWG–556.5 kcmil

Cutting Capacities

Copper and Aluminum Cable	1-1/2" (40 mm)
ACSR.....	954 kcmil (Cardinal)
Standard Guy Strand	5/8"
EHS Guy Strand.....	1/2"
Ground Rod	1/2" (13 mm)
Rebar (schedule 60)	1/2" (13 mm)
Threaded Rod	1/4", 3/8", 1/2"

Punching Capacities

Round.....	5-5/8" (144.1 mm) in 10 ga. mild steel
Rectangular	2.677" x 5.433" (68.0 mm x 138.0 mm)
Square	5.433" x 5.433" (138.0 mm x 138.0 mm)
Accessories required to punch ø 4" through ø 5-5/8":	
12185 spacer, 04686 bushing, and 03170 sleeve	

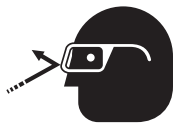

Operation

⚠ WARNING
<p>Inspect tool and dies before use. Replace any worn or damaged parts. A damaged or improperly assembled tool can break and strike nearby personnel.</p> <p>Failure to observe this warning could result in severe injury or death.</p>

	⚠ WARNING
	<p>Pinch points: Keep hands away from the crimping tool head when crimping.</p> <p>Failure to observe this warning could result in severe injury or death.</p>

	⚠ WARNING
	<p>Electric shock hazard: This tool is not insulated. When using this unit on or near energized electrical lines, use proper personal protective equipment.</p> <p>Failure to observe this warning could result in severe injury or death.</p>

⚠ WARNING
<p>Use proper die, connector, and wire combinations.</p> <p>Mismatched components can result in an incomplete crimp. Failure to complete a crimp could result in severe injury, death, or fire if a connection separates or if it has high electrical resistance.</p>

	⚠ WARNING
	<p>Wear eye protection when operating or servicing this tool.</p> <p>Failure to wear eye protection could result in serious eye injury from flying debris or hydraulic oil.</p>

IMPORTANT
<p>Follow the operating instructions and safety information supplied with the hydraulic power source.</p>

Operation—Crimping Using KC12 or KA12 type U-style Dies

Setup

1. Open the tool head.
2. Remove any accessories from the tool head.
3. Select the appropriate set of die adapters and dies.
4. Install the UA12T adapters and U-style dies—one set in each groove. Lock the die adapters in place with the detents.

Important: Die adapters must be locked into place or the die detents will be damaged.

5. Visually check the dies to ensure that they are aligned correctly so that they will complete the crimping operation.
6. Close the tool head.

Preparing the Cable

Follow the lug manufacturer's instructions for appropriate cable strip length.

Crimping Procedure

	<h2>⚠ WARNING</h2>
	<p>Wear eye protection when operating or servicing this tool.</p> <p>Failure to wear eye protection could result in serious eye injury from flying debris or hydraulic oil.</p>

<h2>⚠ WARNING</h2>
<p>An incomplete crimp can cause a fire.</p> <p>Use proper die, connector, and cable combinations. Improper combinations can result in an incomplete crimp.</p> <p>Failure to observe these warnings could result in severe injury or death.</p>

1. Press the latch and open the tool head.
2. Insert the properly assembled connector into the tool head.
3. Close the tool head.
4. Activate the hydraulic power source until the ram has advanced and the crimp is completed.

Note: To ensure a complete crimp, verify that the power source has reached 10,000 psi (700 bar). Refer to the "Periodic Relief Valve Check" in this manual.
5. Stop the power source and allow the ram to retract.
6. Position the crimper for the next crimp. Repeat Steps 4 and 5 for the number of crimps as described in this manual.
7. Open the crimping head and remove the connector.

Note: After completing the last crimp on an aluminum connector, wipe off the excess oxide inhibitor.

Operation—Crimping Using UA12ID Dieless Die Set

Setup

1. Open the tool head.
2. Remove any accessories from the tool head.
3. Install the UA12ID indenter against the ram and lock in place with the detent.
4. Install the UA12ID anvil into the head and lock in place with the detent.

Important: The indenter and anvil must be locked into place or the detents will be damaged.

5. Visually check the indenter and anvil to ensure that they are aligned correctly so that they will complete the crimping operation.
6. Close the tool head.

Preparation

IMPORTANT

For a cUL or UL classified crimp, refer to “Connector Table” in this instruction manual.

1. Select a proper size and type of connector to correspond with the wire or cable.
2. Strip the cable to an appropriate length. Follow the connector manufacturer’s instructions.
Note: Apply an oxide inhibitor, if required. Refer to the connector manufacturer’s instructions.
3. Clean the die seat area.

Crimping Procedure

1. Insert the cable fully into the connector.
2. Place the connector into the V of the crimping head as shown below.

3. If open, close the crimping head. Make sure the head and latch are fully engaged.
4. For a cUL or UL classified crimp, complete the number of crimps specified under “Connector Table” in this manual.
5. For a single crimp, position the connector so the crimp will be located at the center of the barrel. For a double crimp, position the connector so two crimps will be evenly spaced between the connector marks.
6. Activate the hydraulic power source until the ram has advanced and the crimp is completed.
Note: To ensure a complete crimp, verify that the power source has reached 10,000 psi (700 bar). Refer to the “Periodic Relief Valve Check” in this manual.
7. Stop the power source and allow the ram to retract.
8. Lift the latch to open the crimping head and remove the connector.

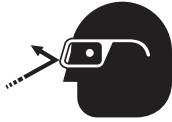

Note: After completing the last crimp on an aluminum connector, wipe off the excess oxide inhibitor.

⚠ WARNING

An incomplete crimp can cause a fire. Use proper die, connector, and cable combinations. Improper combinations can result in an incomplete crimp. Failure to observe these warnings could result in severe injury or death.

Operation—Cutting

	⚠ WARNING
	<p>Electric shock hazard: This tool is not insulated. When using this unit on or near energized electrical lines, use proper personal protective equipment.</p> <p>Failure to observe this warning could result in severe injury or death.</p>

	⚠ WARNING
	<p>Wear eye protection when operating or servicing this tool.</p> <p>Failure to wear eye protection could result in serious eye injury from flying debris or hydraulic oil.</p>

Setup

1. Open the tool head.
2. Remove any accessories from the tool head.
3. Select the appropriate set of blades, using the table provided on this page.
4. Install one blade in each groove. Slide the tab into the slots in the ram and head. Lock them in place with the W-type detents.
5. Visually check the blades to ensure that they are aligned correctly so that they will complete the butting operation.
6. Close the tool head.

Accessory Table

Task	Blade
Copper and aluminum 26 mm (1.00") max.	UC26
Copper and aluminum 40 mm (1.56") max.	UC40
ACSR Copperweld ACAR Guy strand EHS guy strand Ground rod Anchor rod Soft bolts Rebar	UCACSR
Threaded rod	Threaded rod

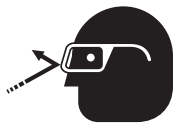

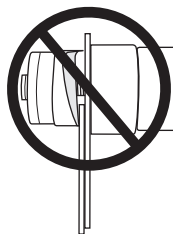

Cutting Procedure

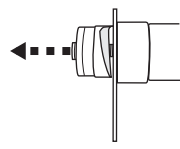

1. Press the latch and open the tool head.
2. Position the item to be cut in the tool head.
3. Close the tool head.
4. Activate the hydraulic power source until the ram has advanced and the cut is completed.
5. Stop the power source and allow the ram to retract.

Operation—Punching

	⚠ WARNING
	<p>Electric shock hazard:</p> <p>Do not use this tool as a punch driver on or near live circuits. This includes, but is not limited to, the following circumstances:</p> <ul style="list-style-type: none"> • Energized electrical lines • Energized circuit breaker panels and fuse boxes • Junction boxes with energized circuits <p>Failure to observe this warning could result in severe injury or death.</p>

	⚠ WARNING
	<p>Wear eye protection when operating or servicing this tool.</p> <p>Failure to wear eye protection could result in serious eye injury from flying debris or hydraulic oil.</p>

	⚠ WARNING
	<p>Do not attempt to punch a hole through two or more thicknesses of material. This will bend or break the draw stud, and could throw parts with great force.</p> <p>Failure to observe this warning could result in severe injury or death.</p>

	⚠ WARNING
	<p>A component failure could throw broken parts.</p> <ul style="list-style-type: none"> • Do not allow anyone to stand in front of the punch. • Close access doors or covers on any equipment that is in line with the punch. <p>Failure to observe this warning could result in severe injury or death.</p>

⚠ WARNING
<p>Set up the tool properly. An improper setup could cause a component to fail and strike nearby personnel with great force.</p> <ul style="list-style-type: none"> • Thread the punch completely onto the draw stud. All of the punch threads must be engaged by the draw stud threads. Incomplete assembly could cause a component failure. • Use only Greenlee punches, dies, and draw studs. Other manufacturers' components might not withstand the forces generated by this punch driver. <p>Failure to observe these warnings could result in severe injury or death.</p>

Operation—Punching (cont'd)

Setup and Punching Procedure

1. Open the tool head.
2. Remove any accessories from the tool head.
3. Install the punch driver so that the drive piston is toward the yoke, as shown.

4. Close the tool head.
5. Select the punch, die, and draw stud to make the appropriate size hole. Refer to the illustrations on the following pages.
6. Determine and mark the exact location for the hole. Use a Greenlee Kwik Stepper® drill bit to drill a hole that is slightly larger than the draw stud. This is the pilot hole.
7. Thread the 3/4" draw stud or 3/4" adapter completely into the punch driver. Refer to the illustrations on the following pages.

Notes: For a punch and die with a 3/8" center hole, thread the 3/8" draw stud into the end of the 3/4" adapter.

For 4" and larger punch and die, add the bushing to the die, slide the spacer over the 3/4" draw stud, and install the 1-1/8" sleeve.

8. Install a spacer, if necessary. Refer to the illustrations on the following pages.
9. Slide the die over the draw stud with the open end of the die facing away from the punch driver.
10. Insert the draw stud through the pilot hole.
11. Thread the punch onto the draw stud with the cutting surfaces of the punch facing the material. Tighten the punch by hand until the spacer, die, material, and punch contact each other.

Note: All of the punch threads must be engaged by the draw stud threads. If any of the punch threads are not engaged, disassemble the setup, remove the spacer, and reassemble the setup.

12. Activate the hydraulic power source to advance the ram.
13. Stop the power source when the punch completes the hole, and allow the ram to retract.
14. Unscrew the punch. Remove slugs from the die. Remove the spacer and unscrew the draw stud.

Operation—Punching (cont'd)

Round Punches

cUL and UL Classified Crimps

Crimps made with the Greenlee UA12ID dieless die and RK12CX crimping tool are cUL and UL classified on standard concentric, compressed, or compact stranded copper and aluminum cable with the connectors listed here.

Refer to the “Connector Table” for the brand names and model numbers of appropriate connectors and the number of crimps required.

Connector Table (NOT for use with flex, navy or welding wire)

Range: Copper Connectors—4 AWG to 750 kcmil
Aluminum Connectors—6 AWG to 600 kcmil

COPPER CONNECTOR TYPE		ANDERSON	BLACKBURN®	BURNDY	ILSCO	PANDUIT	T & B	PENN-UNION	TYCO (AMP)

* When crimping with the UA12ID dieless die set, use the number of crimps listed in this table instead of the number provided with the connector.

Maintenance

- Keep the tool clean. Use the tool with care to keep dirt and grit out of the hydraulic system. Contamination is the most common cause of failure for hydraulic tools.
- Store the tool in its original case with the ram fully retracted.
- Inspect the hydraulic hoses periodically.
- Periodically verify that the power source reaches 10,000 psi (700 bar). Refer to the “Periodic Relief Valve Check” in this manual.

Periodic Relief Valve Check

	⚠ WARNING
	<p>Skin injection hazard:</p> <ul style="list-style-type: none"> • Do not use fingers or hands to check for leaks. • Depressurize hydraulic system before servicing. <p>High pressure oil easily punctures skin causing serious injury, gangrene or death. If injured seek medical help immediately to remove oil.</p>

	⚠ WARNING
	<p>Wear eye protection when using this tool.</p> <p>Failure to wear eye protection could result in serious eye injury from flying debris or hydraulic oil.</p>

	⚠ WARNING
	<p>Pinch points:</p> <p>Keep hands away from closing dies.</p> <p>Failure to observe this warning could result in severe injury or death.</p>

⚠ WARNING

Inspect tool and dies before use. Replace any worn or damaged parts. A damaged or improperly assembled tool could break and strike nearby personnel with sufficient force to cause severe injury or death.

⚠ CAUTION

- Do not operate crimping tool without dies in place. Damage to the ram or crimping tool head may result.
- Do not perform any service or maintenance other than as described in this manual. Injury or damage to the tool may result.

Periodically verify that your hydraulic power source is supplying between 9600 and 10,400 psi (662 and 717 bar).

Use a test-quality pressure gauge on the supply line from the hydraulic power source.

1. Refer to the instructions supplied with the pressure gauge.
2. Stop the flow of hydraulic oil from the power source.
3. Connect the pressure gauge to the supply line of the power source.
4. Install the set of test dies into the crimping tool.
5. Activate the power source until the ram has advanced and the power source reaches relief pressure. The pressure gauge should read between 9600 psi and 10,400 psi (662 bar and 717 bar) .
6. Release the pressure by stopping flow from your power source. The ram will retract.

If crimp pressures are low, the hydraulic power source relief valve may need adjustment.

IMPORTANT

Relief valve adjustments must be performed according to the instructions provided with the hydraulic power source.

Illustration and Parts List

Key	Part No.	Description	Qty
	52045319	Head and ram unit (includes 1–3, 8–12, 14–18)	
1		Compression spring.....	1
3		Compression spring.....	2
4		Screw, M6-1.0 x 75 mm skt head cap....	1
5	52066861	Compression spring.....	1
6	50066900	End cap.....	1
7		O-ring (included in 52054906)	1
8		Screw, M4-0.7 x 8 mm skt head cap.....	4
9		Fixed head	1
10		Movable head	1
11		Latch.....	1
12	52062835	Plate.....	2
13		Adapter disk.....	1
14		Pin, pivot.....	2

15	52062834	Ram.....	1
16		Pin, adapter lock.....	2
17		Bushing.....	2
18		Retaining ring.....	4
19		Screw, M5-0.8 x 10 mm skt head cap....	1
20	50066943	Stop	1
21	52066864	O-ring.....	1
22	52066865	Backup ring.....	1
23	52066863	Piston.....	1
24	52066862	Cylinder.....	1
25	52065528	Decal, ID	1
26	52065823	Coupler kit, 3/8" male.....	1
	52067056	Tag, connector chart.....	1
	50118374	Adapter lock kit (includes 3, 16, 17)	
	52063244	Pin kit (includes 14 and two of item 18)
